

Corrigendum

On pp. 65 and 66 of the article—

Morgner et al. 2010. The importance of winter in annual ecosystem respiration in the High Arctic: effects of snow depth in two vegetation types. *Polar Research* 29, 58–74—

the captions to Figs. 2a and 3a mistakenly state that circles represent snow thickness and squares represent water content.

In fact, squares represent snow thickness and circles represent water content.
