The black-legged kittiwake preen gland – an overlooked organ for depuration of fat soluble contaminants? *Polar Research* 35. Correspondence: Kjetil Sagerup, Akvaplan-niva AS, Fram Centre, PO Box 6606 Langnes, NO-9296 Tromsø, Norway. E-mail: kjetil.sagerup@akvaplan.niva.no

Abbreviations in this supplementary file

DDE: Dichlorodiphenyldichloroethylene

DDT: dichlorodiphenyltrichloroethane

EI: electron ionization

GPC: gel permeation chromatography

HCB: hexachlorobenzene

lme: fitted linear mixed effect

LOD: limit of detection

NCI: negative chemical ionization

PCB: polychlorinated biphenyls

POP: persistent organic pollutant

SPE: solid phase extraction

TPE: thermoplastic elastomer

During storage of the extracts occurred an unfortunate contamination between GPC and SPE clean-up. A TPE-polymer leaked from the septum of the screw cap and contaminated the extracts. This type of septa and screw caps has been tested successfully earlier during method development. A product change on the polymer used in the septa (not announced by the distributor) included a TPE susceptible for organic solvents. The TPE-polymer was observed in the samples during the initial phase of SPE. Accordingly, a second clean-up on the GPC was necessary in order to remove the polymer. Same GPC parameters were applied as in the previous GPC-clean-up. Fractionation on the GPC was adjusted according to the TPE and the extract collection started after the main amount of the polymer was eluted from the column. A total removal of TPE was not possible without a loss of the analytes of interest, i.e., a small amount of TPE remained in the extracts after the second GPC clean-up. Accordingly, gas chromatography with mass-spectrometry analysis of PCBs had to be run in NCI-mode due to the TPE residues causing increased noise in EI-mode (Supplementary Table S1).

Supplementary Table S1. Masses applied for detection of the PCBs and *p,p'*-DDE in NCI-mode.

	Analyte	Quantifier ion	Qualifier ion
Internal standards	13C-Pentachlorobiphenyls	338	336
	13C-Hexachlorobiphenyls	372	370
	13C-Heptachlorobiphenyls	406	404
	13C- <i>p,p'</i> -DDE	330	330
Native compounds	Pentachlorobiphenyls	326	324
	Hexachlorobiphenyls	359.8	361.8
	Heptachlorobiphenyls	393.8	395.8
	Octachlorobiphenyls	428	430
	<i>p,p'</i> -DDE	318	246

The removal of the polymer resulted in a loss of the lowest chlorinated PCBs and some DDT derivatives, which were co-eluting with the main TPE-polymer peak. Therefore, this study does not present the whole spectre of PCBs and pesticides presented in the kittiwakes. However, since the lower chlorinated PCBs only represent a small amount of the Σ PCBs, the loss from each congener is calculated to vary from 0 to 2.4 % of the Σ PCBs, summed up to account for 7 % of the Σ PCBs. The congeners that could not be analysed were PCB-28, -31, -47, -52, -56, -66, -74 and -87. The calculated loss portion was made from a comparable data set on kittiwake liver (Borgå et al. 2005).

Supplementary Table S5. Summary of the linear mixed effect model for β -HCH in black-legged kittiwakes. Interpretation: in each contrast analysis, the first combination of predictor levels (first line) is basis for the interpretation of the three next lines. For example, in contrast analysis 1, the first combination is tissue feather and sampling period 1. The second line gives the lme values for period 2 compared with period 1, still for the organ feather. The interactions (two last lines) are compared to the second line.

	Value	SE	Df	t-value	P value
Contrast analysis 1					
Feather, period 1	- 0.21	0.33	44	- 0.63	0.53
Period 2	- 0.54	0.47	22	- 1.17	0.25
Liver	1.90	0.37	44	5.20	<0.001
Preen gland	3.69	0.37	44	10.01	<0.001
Period 2: liver	2.85	0.52	44	5.50	<0.001
Period 2: preen gland	1.92	0.52	44	3.72	<0.001
Contrast analysis 2					
Preen gland, period 1	3.48	0.33	44	10.55	<0.001

Supplementary Table S6. Summary of the linear mixed effect model for HCB in black-legged kittiwakes. Interpretation: in each contrast analysis, the first combination of predictor levels (first line) is basis for the interpretation of the three next lines. For example, in contrast analysis 1, the first combination is tissue feather and sampling period 1. The second line gives the lme values for period 2 compared with period 1, still for the organ feather. The interactions (two last lines) are compared to the second line.

Liver	- 0.11	0.17	44	- 0.65	0.52
Feather	- 4.30	0.17	44	- 25.09	<0.001
Period 2: liver	0.97	0.24	44	4.00	<0.001
Period 2: feather	- 0.85	0.24	44	- 3.52	0.001
Contrast analysis 3					
Liver, period 1	6.74	0.17	44	40.01	<0.001
Period 2	1.65	0.24	22	6.92	<0.001
Preen gland	0.11	0.17	44	0.65	0.52
Feather	- 4.19	0.17	44	- 24.44	<0.001
Period 2: preen gland	- 0.97	0.24	44	- 4.00	<0.001
Period 2: feather	- 1.82	0.24	44	- 7.52	<0.001
Contrast analysis 4					
Feather, period 2	2.37	0.17	44	14.10	<0.001
Period 1	0.18	0.24	22	0.74	0.47
Liver	6.01	0.17	44	35.07	<0.001
Preen gland	5.15	0.17	44	30.07	<0.001
Period 1: liver	- 1.82	0.24	44	- 7.52	<0.001
Period 1: preen gland	- 0.85	0.24	44	- 3.52	0.001
Contrast analysis 5					
Preen gland, period 2	7.53	0.17	44	44.71	<0.001

Period 1	- 0.68	0.24	22	- 2.85	<0.01
Liver	0.86	0.17	44	5.00	<0.001
Feather	- 5.15	0.17	44	- 30.07	<0.001
Period 1: liver	- 0.97	0.24	44	- 4.00	<0.001
Period 1: feather	0.85	0.24	44	3.52	0.001

Supplementary Table S13. Summary of the linear mixed effect model for PCB-194 (octa-PCB) in black-legged kittiwakes. Interpretation: in each contrast analysis, the first combination of predictor levels (first line) is basis for the interpretation of the three next lines. For example, in contrast analysis 1, the first combination is tissue feather and sampling period 1. The second line gives the lme values for period 2 compared with period 1, still for the organ feather. The interactions (two last lines) are compared to the second line.

	Value	SE	Df	t-value	P value
Contrast analysis 1					
Feather, period 1	- 0.89	0.20	44	- 4.45	<0.001
Period 2	0.03	0.28	22	0.11	0.91
Liver	4.84	0.20	44	24.48	<0.001
Preen gland	4.75	0.20	44	24.03	<0.001
Period 2: liver	1.74	0.28	44	6.22	<0.001
Period 2: preen gland	0.72	0.28	44	2.56	0.01
Contrast analysis 2					
Preen gland, period 1	3.86	0.20	44	19.22	<0.001
Period 2	0.75	0.28	22	2.63	0.02
Liver	0.09	0.20	44	0.45	0.66
Feather	- 4.75	0.20	44	- 24.03	<0.001
Period 2: liver	1.03	0.28	44	3.66	<0.001
Period 2: feather	- 0.72	0.28	44	-2.56	0.01
Contrast analysis 3					
Liver, period 1	3.95	0.20	44	19.67	<0.001
Period 2	1.77	0.28	22	6.24	<0.001
Preen gland	- 0.08	0.20	44	- 0.45	0.66
Feather	- 4.84	0.20	44	- 24.48	<0.001
Period 2: preen gland	- 1.03	0.28	44	- 3.66	<0.001
Period 2: feather	- 1.74	0.28	44	- 6.22	<0.001
Contrast analysis 4					
Feather, period 2	- 0.86	0.20	44	- 4.28	<0.001
Period 1	- 0.03	0.28	22	- 0.11	0.91
Liver	6.58	0.20	44	33.28	<0.001
Preen gland	5.47	0.20	44	27.65	<0.001
Period 1: liver	- 1.74	0.28	44	- 6.22	<0.001
Period 1: preen gland	- 0.72	0.28	44	- 2.56	0.01
Contrast analysis 5					
Preen gland, period 2	4.61	0.20	44	22.95	<0.001

Period 1	- 0.75	0.28	22	- 2.63	0.02
Liver	1.11	0.20	44	5.63	<0.001
