

**Supplementary material for:** Gautier C., Langlois A., Sasveille V., Neave E. & Johnson C.A. 2022. Remote sensing, snow modelling, survey data and Indigenous Knowledge show how snow and sea-ice conditions affect Peary caribou (*Rangifer tarandus pearyi*) distribution and inter-island and island–mainland movements. *Polar Research* 41. ### Banks - spring

### Banks – summer-fall

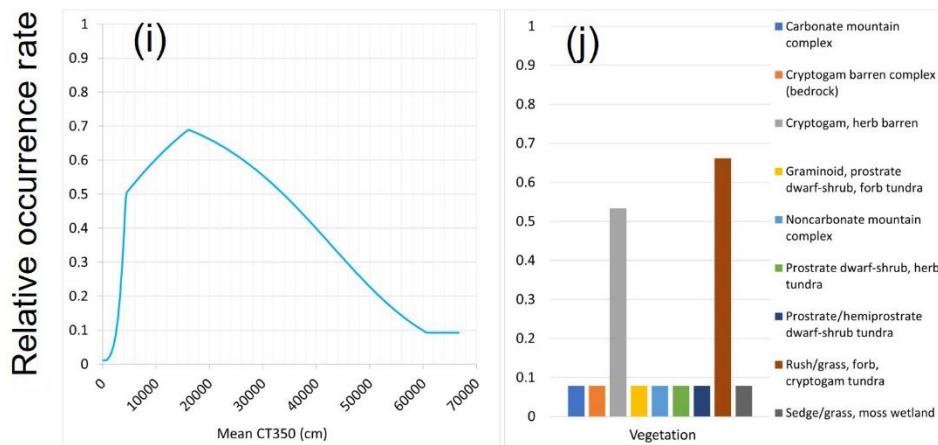

### Melville - spring

## Melville – summer-fall

## Melville - winter

**Supplementary Fig. S1.** Changes in probability of caribou presence (0-1) for environmental variables in the top MaxEnt model, when all other environmental variables are set to their mean value, for each season on Banks Island and Melville Island Complex: Banks Island (a, b) in spring and (c, d) summer–fall; Melville Island Complex (e, f, g) in spring, (h) summer–fall, and (i, j) winter.

**Supplementary Table S1.** MaxEnt results for all the models tested for the three seasons on both Banks Island and Melville Island Complex. The best model results are in boldface. (SD stands for standard deviation.)
